Claims 1-5 are objected to because of the following informalities: In claim 1, - - a - - should precede "binder's" in line 7. In line 15 - - to - - should precede "cause". Appropriate correction is required.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grigg et al.

Grigg et al discloses protecting one side of a wafer by attaching UV tape or wax, mounting the wafer on a holding chuck and grinding the wafer followed by lapping (col.2, lines 13-50).

The reference does not specifically disclose irradiating the tape or attaching wax and tape to the wafer prior to mounting.

In view of the disclosure at col.3 lines 5-10 that irradiation of UV tape allows the tape to be peeled off and the disclosure at col.3, lines 50-60 that wax will act as an adhesive to mount the wafer and that the chuck is heated to melt the wax in dismounting the wafer it would have been within the scope of one of ordinary skill in the art to attach UV tape to the wafer prior to mounting with wax and to irradiate and maintain the chuck at the recited temperature because the steps would enable the mounting, protecting and dismounting steps of the process of col.2, lines 13-50, to be performed. Furthermore, in view of the disclosure that the tape is removed in solid form it would have been within the scope of one of ordinary skill in the art to refrain from melting the tape to avoid unnecessary temperature cycling of the semiconductor devices for example.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
